

QamqorTech

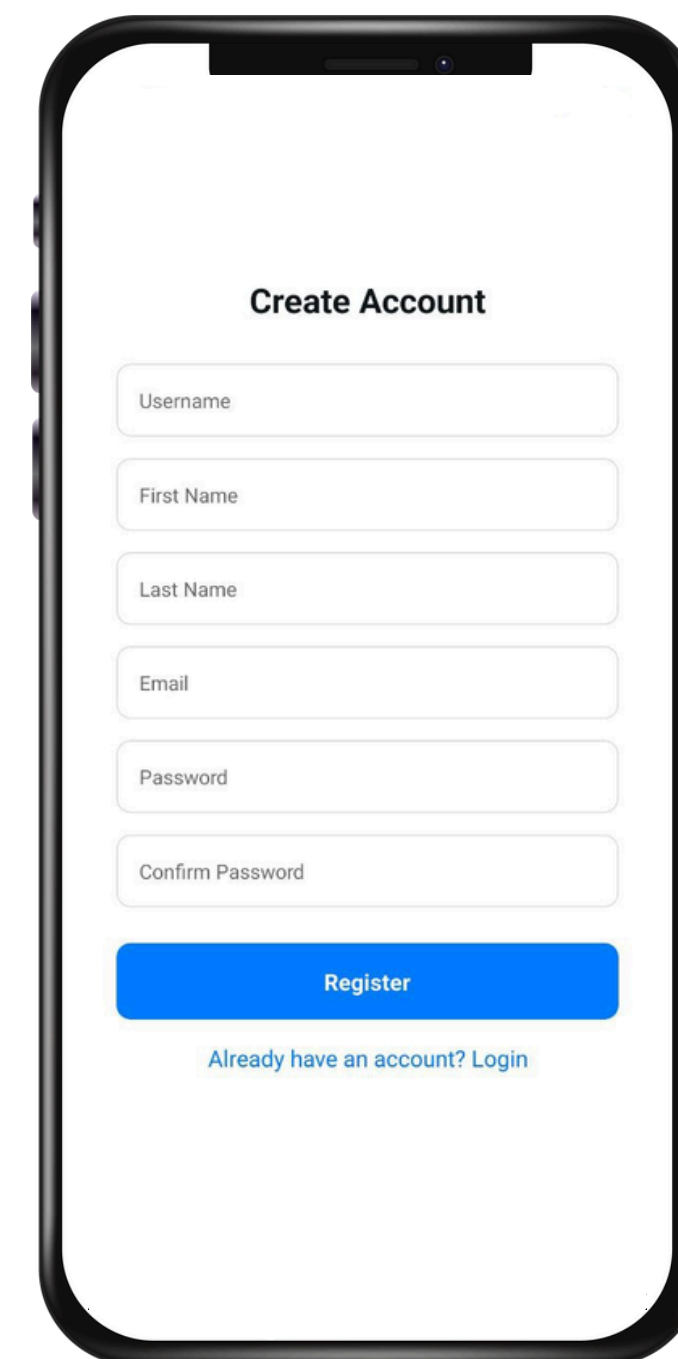

Sensor monitoring system for IOT

Shokabayev Temirlan
Malbekov Chingiz

We are –
QamqorTech

We develop modern solutions for IoT monitoring.

Our goal is to prevent emergency situations and protect people by implementing monitoring technologies.

A black smartphone is shown vertically, displaying a 'Create Account' registration form. The form is centered on the screen and consists of several input fields and a button. At the top, the title 'Create Account' is displayed in bold. Below it, there are six input fields: 'Username', 'First Name', 'Last Name', 'Email', 'Password', and 'Confirm Password'. Each field has a light gray border and a small label inside. Below the input fields is a prominent blue button with the text 'Register' in white. At the bottom of the form, there is a link that says 'Already have an account? Login' in a smaller, blue font. The background of the phone's screen is white, and the phone's black frame is visible around the edges.

IoT (internet of things) – концепция сети передачи данных между физическими объектами («вещами»),

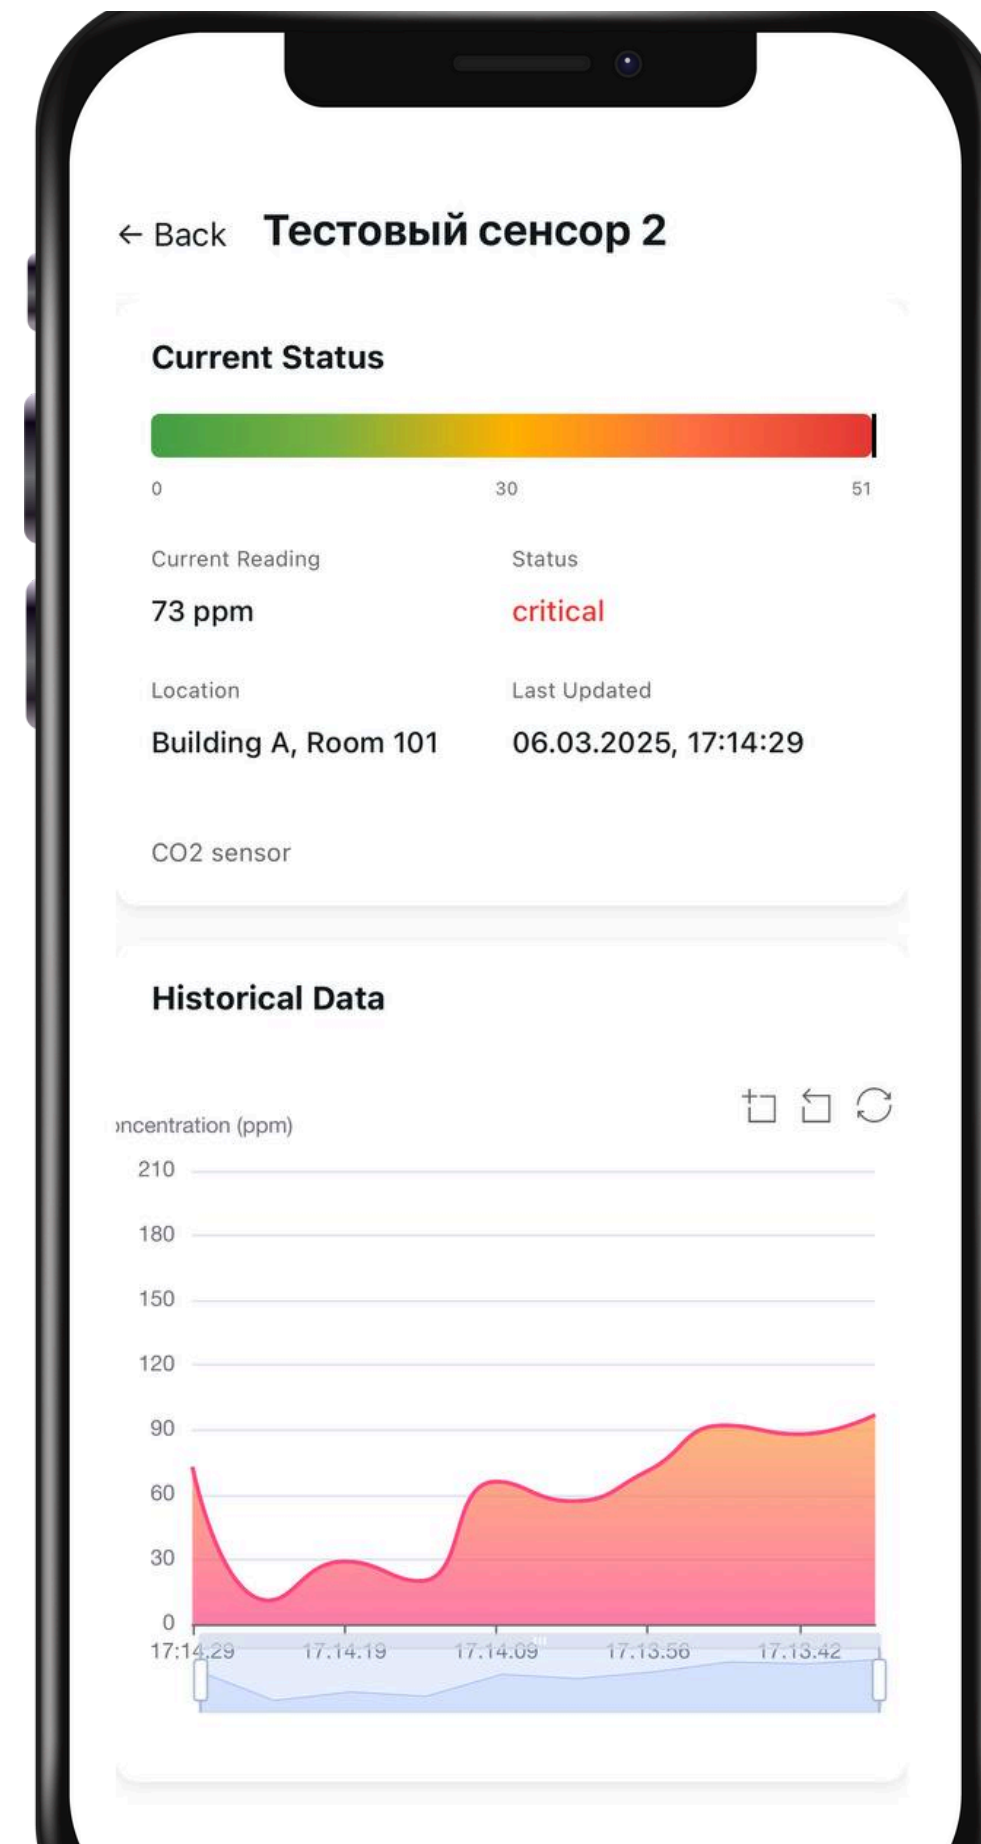

Problem

What problem are we solving?

- Raw and unstructured sensor data
- Lack of classification and visualization
- Data loss due to communication failures
- Difficulty in integration

Our solution:

Automatic processing, categorization and stable data transmission with convenient display (89%, 239 ppm², 39°)

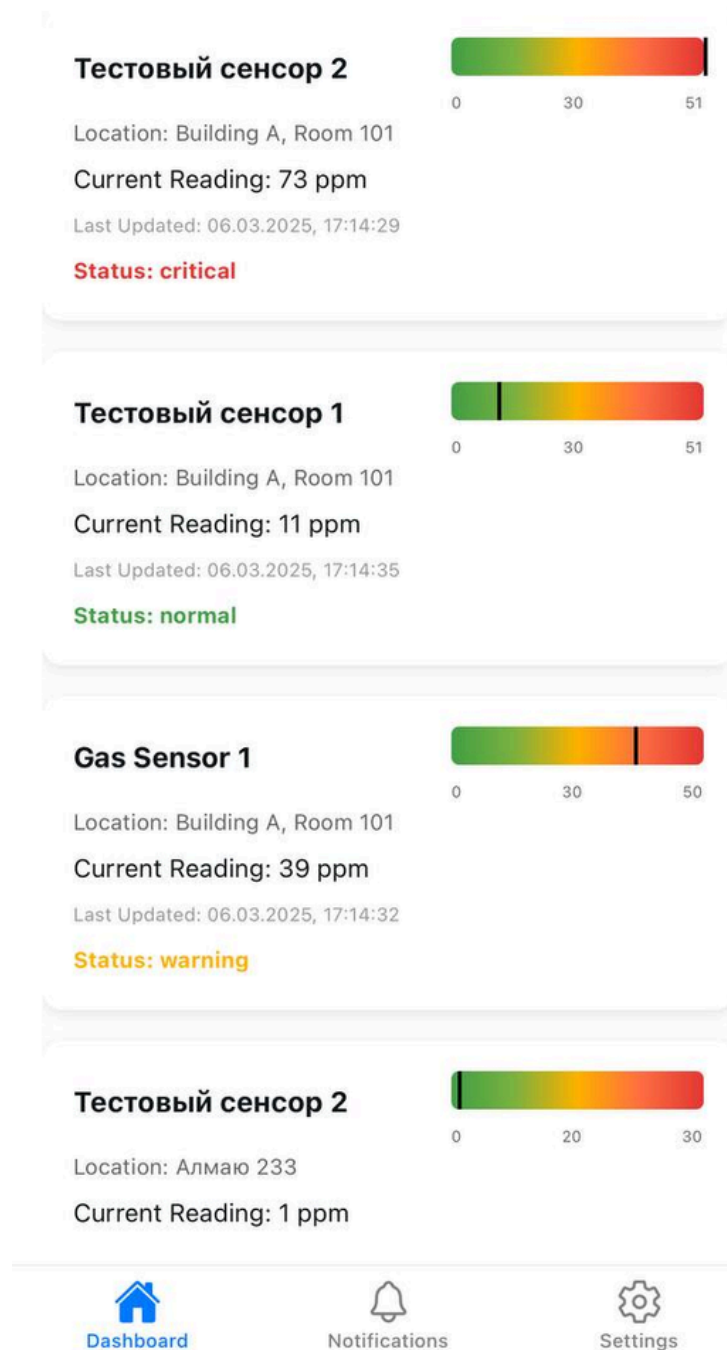

System dashboard on a mobile application

Our dashboard is a convenient and visual tool for monitoring gas safety in real time.

Key elements:

- **Gas concentration graphs – visualization of sensor data for quick situation analysis**
- **Detailed information – display of sensor locations, last sensor reading.**
- **Alert system – instant notifications about exceeding limit values.**
- **Event log – history of all recorded leaks and system actions.**
- **Graph-based analytics – display of graphs based on accumulated data**

Sensor Dashboard

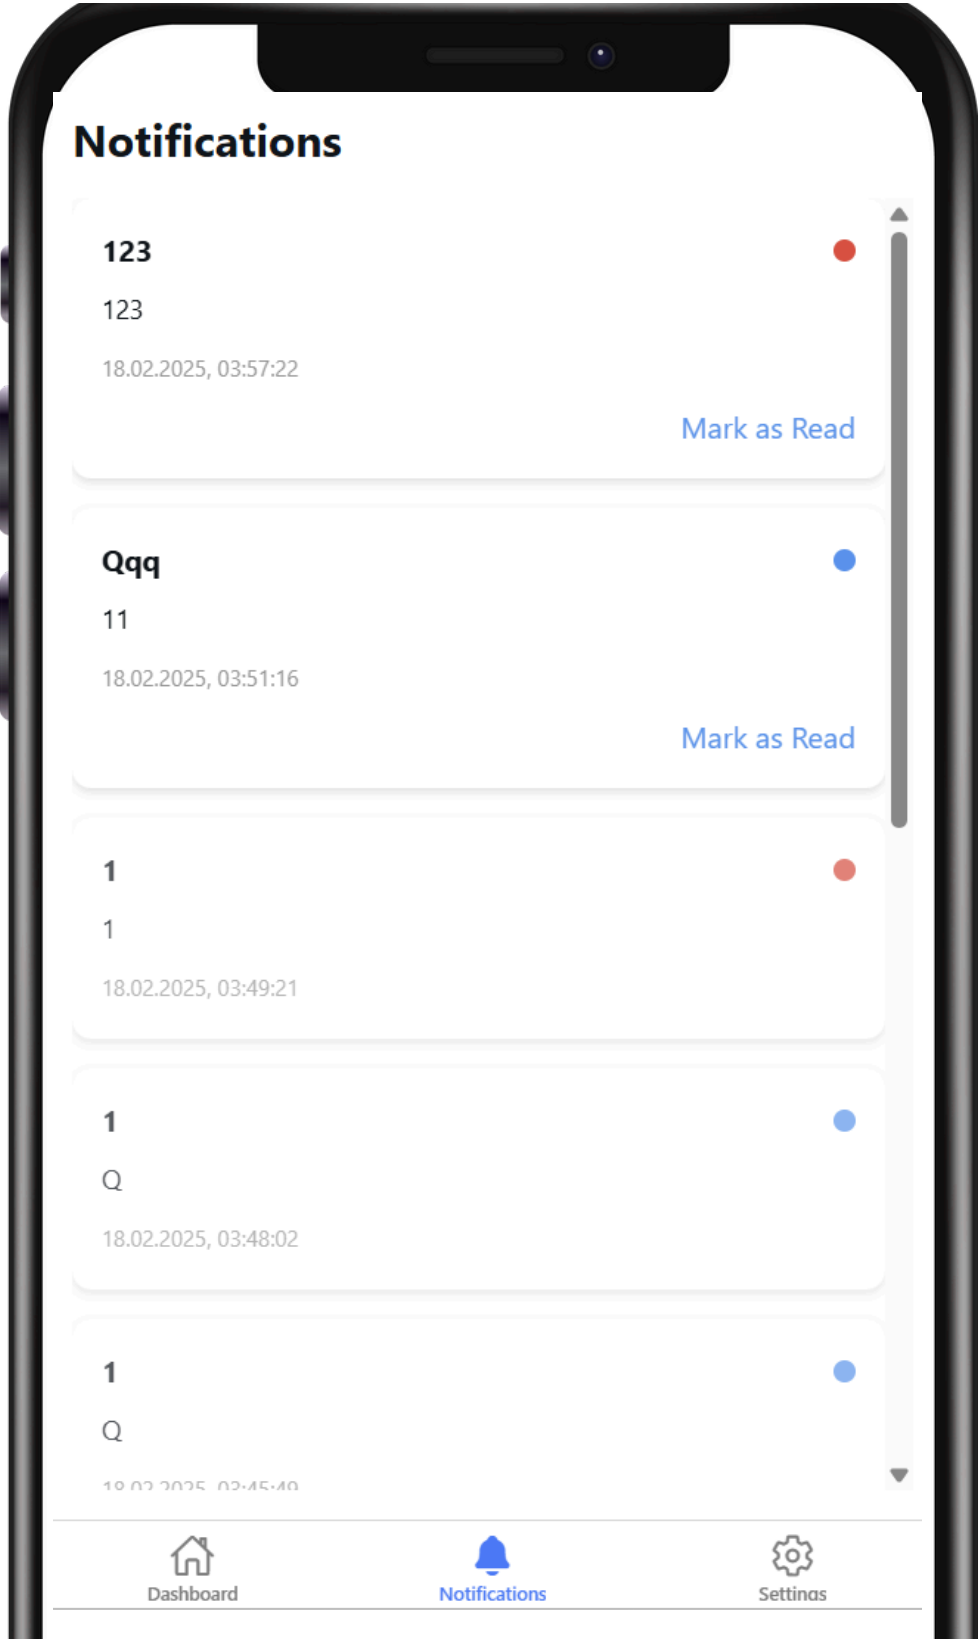

← Back Тестовый сенсор 2

ALERT SYSTEM

instant notifications of exceeded limits and a history log of all recorded leaks and system actions

Flexible administrable system

Our mobile application provides convenient administration of sensors at any time and in any place.

Admin panel: access control and user management

- Adding and deleting sensors to the system
- Configuring thresholds and notifications
- Role distribution - assigning roles (administrator, operator/user)
- Remote sensors
